Education

St. Francis Institute of Technology 2023 – 2027
Bachelor of Engineering in Electronics and Telecommunication Engineering *Mumbai*

Professional Experience

Frontend Developer Intern 06/2025 – 09/2025
QuickYearning Pvt. Ltd *Andheri, Mumbai*

- Built 20+ reusable UI components in React.js, Next.js, and Tailwind CSS, consolidating repeated layout and form patterns into a shared component library used across the product.
- Integrated 15 REST API endpoints into frontend modules, working with the backend team on request/response contracts for a Node.js and MongoDB data layer
- Built a transaction monitoring dashboard giving real-time visibility into financial data, including filtering, sorting, and status views for tracked transactions.

Skills

Languages: C/C++, JavaScript, Python, TypeScript, HTML, CSS

Frameworks / Libraries: React.js, Node.js, Express.js, Tailwind CSS

Databases: MySQL, MongoDB, PostgreSQL, Firebase

Tools & Technologies: Git, GitHub, GitHub Actions (CI/CD), REST APIs, Postman

Projects

PlayMaidan
Full-Stack Sports Facility Booking Platform

- Designed and built a 25+ endpoint REST API (Express, Prisma/PostgreSQL) covering auth, facility/court management, bookings, and payments, with role-based access control and JWT authentication enforced at the middleware and controller level.
- Prioritized data correctness under concurrent load: used atomic updateMany transactions to make slot booking race-safe, and verified it with a custom parallel-request test suite so no two customers could ever be charged for the same slot.
- Built the customer and owner-facing React frontend with real-time slot updates via Socket.io, analytics dashboards, and Razorpay payment integration with server-side HMAC-SHA256 signature verification.

ClauseBreaker AI
AI-powered text analysis platform

- Built an AI-powered legal document analysis platform that extracts and simplifies contract clauses from PDF and DOCX files using the Gemini API, generating plain-language clause explanations and contract summaries.
- Built a document comparison module that identifies and highlights clause-level differences between two uploaded contract versions.

SyncEdu
Real-Time Educational Ecosystem

- Built a full-stack LMS with role-based workflows where admins create PDF assignments with deadlines and students submit solutions with automated Pending / Completed / Overdue status tracking.
- Implemented JWT authentication, bcrypt password hashing, and Axios interceptors for token handling; integrated Cloudinary for persistent PDF storage and cloud deployment.
- Developed an admin dashboard with task-completion analytics and automated student onboarding, including email-delivered credentials and submission notifications via Nodemailer.

Certificates

Developing Back-End Apps with Node.js and Express – IBM
Introduction to Generative AI – Google Cloud
